Thermo Scientific Dionex Integrion HPIC System

The Thermo Scientific™ Dionex™ Integrion™ HPIC™ System is a fast, simple and secure solution to provide the performance you need today while protecting your investment for tomorrow.

Your Results, Faster

Pump

The Dionex Integrion HPIC system pump features a variable flow, serial-piston design that delivers consistent flow rates with low pulsation, resulting in low detector noise.

By increasing the pressure tolerance of the pump up to 6000 psi, and allowing linear flow rates from 0.001 to 10 mL/min, the Dionex Integrion HPIC system can achieve substantially shorter run times, providing increased throughput and productivity.

Integrated system

The integrated system performs all typical ion chromatography (IC) separations using conductivity or amperometric detection modes.

The integrated design of the Dionex Integrion HPIC system delivers high performance in a small footprint, saving critical bench space while ensuring convenient access to all components for upgrades or maintenance. The bottle tray holds a 2 L eluent bottle in the front compartment allowing easy viewing of eluent levels, and can hold additional bottles of up to 4 L in the rear compartment.

Your Workflow, Simplified

Consumable Tracking

The Dionex Integrion HPIC system enables tracking and monitoring of performance and usage across all consumables to enable proactive maintenance and replacement. Consumables tracking of electrolytic consumables is standard on all systems; tracking via radio frequency identification (RFID)* is standard on models equipped with a column oven.

* The wireless transmitter devices may not be authorized as required by the laws of your country; and these features will not be, offered for sale or lease, or sold or leased, until proper authorization is obtained. Please consult your local sales representative for details.

Metrics

- 1. Date of First Install
- 2. Number of Injections
- 3. Number of Samples Concentrated
- 4. Total Volume of Injections
- 5. Total Volume Concentrated
- 6. Maximum Flow Rate Seen
- 7. Maximum Temperature Seen
- 8. Maximum Pressure Seen
- 9. Maximum Voltage Seen
- 10. Maximum Current Seen
- 11. Last Separator Column Paired With
- 12. Last Guard Column Paired With
- 13. Total Eluent Volume Seen
- 14. Total Voltage Hours Seen
- 15. Total Current Hours Seen
- 16. Eluent Types Exposed To
- 17. Weekly Flow Rate Data Array
- 18. Weekly Pump Pressure Data Array
- 19. Weekly Background Conductivity Data Arrav
- 20. Weekly Current Data Array
- 21. Weekly Voltage Data Array

Consumables

- a. Guard Columns (GC)
- b. Separator Columns (SC)
- c. Concentrator Columns (CC)
- d. Trap Columns (TC)
- e. Constant Current Electrolytically Regenerated Suppressors (CCERS)
- f. Constant Voltage Electrolytically Regenerated Suppressors (CVERS)
- g. Continuously Regenerated Trap Columns (CRTC)

- Information stays with the consumable, regardless of which system it is installed in
- Monitors up to 16 key performance metrics on each of up to 7 different consumables simultaneously
- Verifies consumable performance against product specifications and production quality assurance data
- Facilitates checks of inter-consumable compatibility

Tablet

The Dionex Integrion HPIC system supports wireless tablet control, providing the ability to have full, detailed system control and status wherever you need it.

- Secured WiFi communication direct to the instrument with no broadcast data
- Control and monitor one instrument at a time, with instrument switching as easy connecting to a new wireless network
- Range up to 9 m (30 feet)

Remote Monitoring

Optional remote monitoring and diagnostic software notifies operators, lab managers, or other personnel when maintenance is required. Alerts are sent to service engineers at Unity Lab Services when the system is not functioning correctly so that remote troubleshooting can be performed.

- Monitors only instrument performance, not sample data
- Features encrypted 128-bit SSL point-topoint communication
- Works with most commercially available antivirus and firewall software

Simplified System Performance

Eluent Generation

The eluent generator electrolytically generates high-purity eluents on-line, ensuring perfectly consistent performance day to day, lab to lab, and operator to operator. With eluent generation, gradient separations can be as easy as isocratic applications.

The eluent generator delivers eluent concentrations from 0.1-100 mM for KOH and MSA at typical application flow rates (1 mL/min or lower) and high pressures of up to 5000 psi. High purity eluents are generated from deionized (DI) water using the Thermo Scientific Dionex EGC Eluent Generator Cartridge and then polished of contaminants using one of the Thermo Scientific Dionex CR-TC Continuously Regenerating Trap Columns. Control, status, and diagnostics are provided with the Thermo Scientific™ Dionex™ Chromeleon™ Chromatography Data System (CDS) Software. Since the pump delivers only water and eluents are generated on-line, the lifetime of the pump pistons and seals extended, and piston contamination during seal wash is eliminated.

Detector options

The Dionex Integrion HPIC system can be configured with either a conductivity detector (CD) or an electrochemical detector (ED). Any of the detectors can be easily installed by the user.

- Control using Chromeleon CDS software or locally through TTL (Transistor Transistor Logic) inputs
- Electronics are integrated between cell and detector for greater stability
- Built-in electronics allow for easy calibration and diagnostics

Conductivity Detector Features

- Microprocessor-controlled digital signal processing detects both high and low concentrations of analytes smoothly and without range changes
- Supports all IC and reagent-free ion chromatography™ (RFIC™) system applications with maximum range up to 15,000 µS/cm
- · For easy calibration and diagnostics

Electrochemical Detector Features

- Cell body design provides defined and consistent torque to cell gasket for consistent unit-to-unit response of working electrodes
- Uses microprocessor-controlled digital signal processing
- Supports DC amperometry, pulsed amperometry, or integrated pulsed amperometry detection modes
- Uses either pH-Ag/AgCl, Ag/AgCl, or Palladium Hydrogen (PdH) reference electrode; new one-piece PdH reference electrode provides consistency and reliability

Thermal Control

Column Oven

The column oven provides precise temperature control over a wide temperature range with fast heat-up times.

- Supports all standard bore and microbore guard and separator column sizes, in addition to single and dual valve configurations
- Forced-air, in-line temperature control stabilizes operating conditions and reduces temperature gradients to ensure consistent separations
- Temperature is user-settable from 5 °C above ambient to 80 °C
- Configurable for microbore (2 mm i.d.), standard bore (4 mm i.d.), and 9 mm i.d. columns

Detector Compartment

The detector compartment provides a thermally controlled environment for superior electrolytic suppression and suppressor lifetime. In addition, the detector compartment is thermally stable for optimum conductivity and electrochemical detection consistency.

- Forced-air, Peltier temperature control stabilizes operating conditions and reduces temperature gradients during chromatography
- Temperature-controlled zone stabilizes operation of suppressors and detectors

Temperature is user-settable from 15 °C (or 20 °C below ambient) to 40 °C.

Temperature Stability: ±0.2 °C (at 15 °C) Time to Equilibration (ambient to ambient minus 20°C): 30 minutes Suppression Modes Chemical Suppression 2 mm and 4 mm, anion and cation, membrane suppression Electrolytic Suppression Recycle Mode 2 mm and 4 mm, anion and cation, membrane suppression Electrolytic Suppression External 2 mm and 4 mm, anion and cation, membrane suppression Water Mode		Temp. Range: 15 (or 20 °C below ambient) to 40 °C (59 to 104 °F)	
Time to Equilibration (ambient to ambient minus 20°C): 30 minutes Suppression Modes Chemical Suppression 2 mm and 4 mm, anion and cation, membrane suppression Electrolytic Suppression External 2 mm and 4 mm, anion and cation, membrane suppression Electrolytic Suppression External 2 mm and 4 mm, anion and cation, membrane suppression Water Mode			
Suppression ModesChemical Suppression2 mm and 4 mm, anion and cation, membrane suppressionElectrolytic Suppression Recycle Mode2 mm and 4 mm, anion and cation, membrane suppressionElectrolytic Suppression External2 mm and 4 mm, anion and cation, membrane suppressionWater Mode		Temperature Stability: ±0.2 °C (at 15 °C)	
Chemical Suppression 2 mm and 4 mm, anion and cation, membrane suppression Electrolytic Suppression Recycle Mode 2 mm and 4 mm, anion and cation, membrane suppression Electrolytic Suppression External 2 mm and 4 mm, anion and cation, membrane suppression Water Mode		Time to Equilibration (ambient to ambient minus 20°C): 30 minutes	
Electrolytic Suppression Recycle Mode 2 mm and 4 mm, anion and cation, membrane suppression Electrolytic Suppression External 2 mm and 4 mm, anion and cation, membrane suppression Water Mode	Suppression Modes		
Electrolytic Suppression External 2 mm and 4 mm, anion and cation, membrane suppression Water Mode	Chemical Suppression		
Water Mode	Electrolytic Suppression Recycle Mode		
Non-Suppressed Conductivity Supported - both anion and cation		2 mm and 4 mm, anion and cation, membrane suppression	
	Non-Suppressed Conductivity	Supported - both anion and cation	

	SPECIFICATIONS (cont'd)
Conductivity Detector	
Electronics Type	Microprocessor controlled digital signal processing, autoranging
Cell Drive	8 kHz square wave
Linearity	1%
Resolution	0.00238 nS/cm
Output Range	Digital Signal Range: 0–15,000 μS/cm
	Analog Signal Range: 0–15,000 μS/cm
Noise, Wet	≤ 0.2 nS at 23 µS/cm background
	\leq 0.1 nS at 1 μ S/cm background
Filter	Rise times 0 to 10 s, programmable
Sampling Rate	1 to 100 Hz, user settable or automatic
Cell Temperature	7 °C above ambient to 60 °C maximum
Cell Temperature Stability	< 0.001 °C
Cell Temperature Compensation	Default 1.7% per °C; programmable from 0–3% per °C
Flow Cell Maximum Pressure	10 MPa (1500 psi)
Flow Cell Volume	0.7 μL
Cell Electrodes	Passivated 316 stainless steel. Compatible with MSA
Cell Body	Chemically inert polymeric material
Heat Exchanger	Inert, tortuous-path for low longitudinal dispersion
Electrochemical Detector	
Electronics Type	Microprocessor controlled digital signal processing
Electronic Noise, Wet	IPAD (Au electrode) < 50 pC at 10 mM KOH, DC Amperometry (GC) < 10 pA
Potential Range	-2.0 to 2.0 V in 0.001 V increments
Signal range (Digital and Analog)	Integrated Amperometry: 50 pC to 200 μ C DC Amperometry: 5 pA to 74 μ A
Filter	0-10 s response time, user settable
Control Mode	Local or remote control using relay closures or TTL, or control using Chromeleon CDS software via DC module
Cell Body	Titanium body. Compatible with 2–7 mm i.d. columns
Working Electrodes	Conventional: gold, glassy carbon, platinum, and silver
	Disposable: gold, platinum, carbon, and silver
Reference Electrode	pH-Ag/AgCl combination, one piece design PdH, one piece design
Autoranging	Yes
Analog Output	User selectable full scale of 10, 100, or 1000 mV
Cell Volume at Working Electrode	< 0.2 μL
Maximum Cell Operating Pressure	0.7 MPa (100 psi)
Internal Power Supplies	
Internal Power supplies	Constant current (CC) or constant voltage (CV) power supplies
	Option 1: 1 channel CC [0 - 500 mA] or CV [0 - 36 V]
	Option 2: 2 channels CC [0 - 500 mA] or CV [0 - 36 V]
	Option 3: 1 channel CC [0 - 500 mA] & 2 channels CC [0 - 500 mA] or CV [0 – 36 V]
	Option 4: 1 channel CC [0 - 500 mA] & 4 channels CC [0 - 500 mA] or CV [0 - 36 V]

	SPECIFICATIONS (cont'd)	
System Software		
Software	Chromeleon CDS software, version 7.2 or higher	
Automated Workflow Wizards	Standard feature	
System Smart Startup and Shutdown	Standard feature	
Automation Support of 3rd Party Instruments	Fully controls over 400 different instruments from more than 30 manufacturers, including GC, HPLC, and MS	
Customizable System Control Panels	Standard feature	
Signal Channels	Detector signals and pump pressure as standard	
Data Trending Plots	All numerical device parameters	
System Status Virtual Channels	Standard feature	
Network Failure Protection	Standard feature for networked installations	
System Trigger Commands and Conditionals	Standard feature	
Daily Audit Trail	Standard feature	
Sample Audit Trail	Standard feature	
System Calibration Storage	Factory, present and previous. Completely user selectable.	
Customized Reporting	Standard feature with unlimited report sheets	
GLP Compliance	Optional	
Physical Specifications		
Power Requirements	100-240 V ac, 50-60 Hz autoranging	
Operating Temperature	$440~^{\circ}\text{C}$ (40–104 $^{\circ}\text{F});$ cold-room compatible (4 $^{\circ}\text{C})$ as long as system power remains on	
Operating Humidity Range	5–95% relative, noncondensing	
Control Modes	Full control through front panel and Chromeleon CDS software; alternative control through TTL or relay closures; two relay outputs, two TTL outputs, four programmable inputs	
USB Communication Protocol	One USB input; one built-in two-output USB hub	
Leak Detection	Built-in, optical sensor	
Dimensions (h \times w \times d)	$62.5 \times 30.0 \times 55.9 \text{ cm}$	
	$(24.6\times11.8\times22\text{ inches})$	
Weight	41 kg (90 lb)
